

Wastewater Networks

By rita maria ugarelli

LAP Lambert Academic Publishing. Paperback. Book Condition: New. Paperback. 356 pages. Dimensions: 8.7in. x 5.9in. x 0.8in. Asset Management (AM) is a set of procedures operable at the strategic-tactical-operational level, for the management of the physical assets performance, associated risks and costs within its whole life-cycle. AM combines the engineering, managerial and informatics points of view. In addition to internal drivers, AM is driven by the demands of customers (social pull) and regulators (environmental mandates and economic considerations). AM can follow either a top-down or a bottom-up approach. Considering rehabilitation planning at the bottom-up level, the main issue would be to rehabilitate the right pipe at the right time with the right technique. Finding the right pipe may be possible and practicable, but determining the timeliness of the rehabilitation and the choice of the techniques adopted to rehabilitate is a bit abstruse. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
