Household Final Consumption. Rank Positions in a Sample of 55 Countries and 11 Indicators

By Stanko Radmilovic

GRIN Verlag GmbH. Paperback. Book Condition: New. Paperback. 12 pages. Dimensions: 10.0in. x 7.0in. x 0.0in.Scientific Study from the year 2013 in the subject Economics - Macro-economics, general, University of Novi Sad, course: Economics, language: English, comment: Prof. dr Stanka Radmilovic, ex-premier of Serbia Novi Sad - 21108 Sremska Kamenica, Slobodana Bajia 49 Personal Web site: http: radmilovicstanko. com , abstract: Macroeconomic category Household final consumption expenditure, etc. essentially (and in simplified terms) is part of GDP, which is (in one way or another) extracted from the real sector of the economy. It is clear that he does not spend the whole finally and promptly. The reasons are both economic and technical, and here we can not go into detailed explanation. There is important to highlight two other important implications: (1) This means that the gross domestic savings (accumulation) is not only the primary form of retained profits in the real economy (in mikrokonomskm entities), but also (2) that extracted portion of GDP (the part that is not consumed promptly) outside the sector of the real economy, secondarily formed (included in) the gross domestic savings (accumulation). This opens up the possibility, moreover, necessity of known traditional function of time (term),...
